ITEM 3: PROPOSED WORK

Identify the action required (add, change, delete) and describe the specific work requested to the convention of standard. For convention work, identify section, page number, affected item, and any other information that clarifies the request. For standard work, identify segment, segment position, segment attribute, data element, data element attribute, and any other information that clarifies the request. Acronyms/abbreviations must be spelled out. New codes must include an expanded code definition.

ACTION: Change

Description:

At index 109-03 change the L503 DOD Recommended Attributes min/max length from 6/8 to 1/8. Replace the DIC reference T_0 18/18 with T_0 15/19 and add usage note that reads: "DIC reference is applicable only when qualified with the value 'I' in the L504."

ITEM 4: REASON FOR CHANGE (business case)

Explain why you need the proposed change. Provide a complete scenario that tells what the business function, operation, or problem is that will be satisfied by a change to the convention. Technical assessment requires enough information to be able to propose an alternate solution, if necessary. Be specific. Use additional paper if necessary.

As defined by the DTR Appendices Z and NN, the current DOD Recommended Attributes do not support the minimum field length requirements for Water Type Cargo Code or Air Commodity Code. DIC reference is updated to support passing of the applicable data as qualified by the options listed in the L504.

ITEM 1: DEVELOPMENT HISTORY

11/02/2011 16:06:59 Mr. Craig R. Matlock - Air Mobility Command - Abstain (no impact) : AMC/A4TI Abstains as the current attributes don't support the minimum field length.

11/15/2011 12:34:15 Ms. Heidi M. Daverede - DLMSO - Approve - with comments : Concur with need to satisfy X12 syntax; however, I don't understand why DTEB is changing the min/max from 1/12 (X12 standard) to 1/8 (DTEB IC), when the default value is "00". It would seem that if you're going to change it, then it should go to 2/2.
