

## APPENDIX KK

### WATER COMMODITY CODES

#### A. GENERAL

The water commodity, type cargo, and special handling codes are a five-position combination. This combination is obtained using Appendices KK, LL and NN. The first three positions of the code identify the water commodity. The fourth position further identifies certain types of cargo, primarily those that are hazardous (Appendix NN) and is used with the fifth position to indicate the nature of a commodity or item, which may require special handling (Appendix LL). The specific special handling requirements are further identified in trailer data (e.g., actual temperature control range, type of hazardous materiel, or outsize dimensions).

The most current version of Water Commodity codes is available at the USTRANSCOM Reference Data Management System website at: <https://trdm.c2.amc.af.mil/trdm/index.jsp>, then click on DTR Data and Water Commodity. Select Display Data from Action Legends box. They are accessible by all users, to include Department of Defense contractors and vendors through the Defense Transportation Electronic Business website at <http://www.transcom.mil/dteb/>, click on Reference Data.
