Single Sign-On for Common Operating Picture (COP) Deployment and Distribution (D2)

Project Summary: Project provided a Single Sign-On (SSO) solution through a Deployment and Distribution (D2) portal via Global Combat Support System (GCSS) Command and Control (C2)/Joint Task Force (JTF). The SSO leverages existing capabilities to support the initial phase of developing a COP D2. A SSO solution provides the warfighter with visibility of data and information across the Joint Deployment and Distribution Enterprise (JDDE) in one common portal.

Bubbles represent various C2 systems with a single sign on capability through GCSS-J

Project Completed: Jul 08

Benefit: This effort is the first development of the larger COP D2 initiative. This single portal accessing existing capabilities supported by: Global Transportation Network (GTN), Asset Visibility (AV), Single Mobility System (SMS), Battle Command Sustainment Support System (BCS3), Intelligent Road/Rail Information System (IRRIS), Radio Frequency - In Transit Visibility (RF-ITV), will enable the warfighter to experience a smoother transition, easier access capability to the information available within the portal. The warfighter enters the portal, with a SSO, and has immediate access to the systems, without additional log-in/user account/password requirements.
